OBJECTIVE

Computer Science Engineering student specializing in Data Science with hands-on experience in Machine Learning, Data Science, and Artificial Intelligence. Proficient in Python and Java with a strong foundation in Data Structures and Algorithms. Experienced in building scalable, real-world solutions using data-driven approaches, seeking an opportunity to apply skills in a practical environment.

EDUCATION

B.Tech in CSE (Data Science)

Aditya University • Surampalem, Kakinada, Andhra Pradesh • GPA: 8.69 Aug 2023 - Present

Intermediate in MPC

Sri Chaithanya Jr college • Rajahmundry, Andhra Pradesh • GPA: 96.2% Jun 2021 - May 2023

SSC

Saraswathi Vidhya Nikethan • Rajahmundry, Andhra Pradesh • GPA: 96.6% Jun 2020 - May 2021

SKILLS

- **Programming Languages:** Java, Python, C
- **Machine learning :** Regression, Classification, Model Evaluation, Feature Engineering
- **Data Science :** EDA, Data Cleaning, Visualization
- **Core Concepts :** Operating Systems (OS), Database Management Systems (DBMS), Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA)
- **Databases:** Oracle SQL
- **Tools:** Git, Github, Docker(basic)

PROJECTS

LLM Powered Intent Classifier ([GitHub Repo](#))

- Use Case: Built an LLM-powered prompt routing system that classifies user intent with ~90% accuracy and dynamically routes requests across 4 specialized AI personas, improving response relevance and reducing generic outputs by over 50%.
- Tech Stack: Python, Groq API (Llama-3.1 LLM), Prompt Engineering, Docker, Docker Compose, JSONL Logging, CLI Interface.

Demand Forecasting and Inventory Optimization System for Retail ([GitHub Repo](#))

- Use Case: Implemented probabilistic forecasting (P10–P90) and inventory optimization for 6,700+ SKUs, achieving ~90% service level and improving replenishment efficiency and reducing stockout risk by ~10–15%.
- Tech Stack: Python, LightGBM, Pandas, NumPy, Scikit-learn, Streamlit, Plotly, and modular pipeline architecture for forecasting, monitoring, and inventory optimization.

Production-Grade A/B Testing Framework ([GitHub Repo](#))

- Use Case: Designed and implemented an A/B testing system that processed 100+ live API requests, reduced model latency by ~85%, and identified the optimal model with statistical significance ($p < 0.05$).
- Tech Stack: FastAPI, Scikit-learn, SQLite, Pandas, NumPy, SciPy, Streamlit, Docker, Pytest
